## ADDING THE SUBWOOFER TO YOUR SPEAKER SYSTEM

We recommend you use color-coded or marked wires to help you correctly connect the subwoofer to your sound system. Color-coded wires have a stripe, and marked wires have ridges along one of the conductors. Your local RadioShack store has a wide selection of speaker wire.

With the subwoofer in the chosen location, make the following connections.

1. Connect your amplifier/receiver's left and right speaker terminals to the subwoofer's corresponding INPUT terminals.

2. Connect the subwoofer's OUTPUT terminals to the corresponding left and right stereo speakers.

### Notes:

- For distances less than 25 feet, use 18-gauge speaker wire.
- For distances greater than 25 feet, use heavier 16-gauge speaker wire.
- For maximum bass response and the best overall performance, it is essential that you keep your subwoofer in proper phase with your speakers (connected + to + and - to -).
